Academic program	Incoming Exchange Student Courses		
Type d'EC	Classes		
Tutorials : 20h00 Project : 130h00 Total duration : 280h00	Status : Obligatoire	Period : Semester 8_Robotique and Automation	Education language : English

Learning Outcomes
The semester project aims to enable international students to: - Apply the theoretical and practical knowledge acquired during the semester. - Develop skills in project management, problem-solving, and independent work. - Produce high-quality professional work that may be technical or societal in nature. - Present and defend their project before a jury through an oral presentation and/or a written report.

Content
Choice of topic: Students select a project topic in agreement with their supervisor. The topic can be technical (such as developing an application, data analysis, etc.). Implementation: Execution of the project according to the established plan, with possible adjustments based on needs and unforeseen circumstances. Write-up: Compilation of results, analysis, and conclusions into a written document. Preparation for the defense: Preparation of a structured and convincing oral presentation.
